This intensive one-and-a-half-day course is designed to provide a structured and comprehensive review of the most relevant topics in contemporary pediatric urology. The program will focus on clinical reasoning and evidence-based decision-making.

A distinctive feature of this course is its strong emphasis on **clinical case-based discussion**, closely aligned with the format and expectations of the FEAPU examination. Participants will engage in interactive case analyses that mirror the structured clinical discussions encountered during the FEAPU exam, offering valuable preparation in diagnostic strategy and therapeutic planning.

The educational format combines concise expert-led presentations with time for moderated discussion, allowing participants to explore complex scenarios.

The course is intended for pediatric surgeons and urologists in training, pediatric urology fellows, and all clinicians involved in the care of children with congenital and acquired disorders of the urinary and genital tract.

We look forward to welcoming you to this interactive and enjoyable educational experience
